Описание проекта

Инвесторы из фонда «Shut Up and Take My Money» решили попробовать себя в новой области и открыть заведение общественного питания в Москве. Заказчики ещё не знают, что это будет за место: кафе, ресторан, пиццерия, паб или бар, — и какими будут расположение, меню и цены. Для начала они просят вас — аналитика — подготовить исследование рынка Москвы, найти интересные особенности и презентовать полученные результаты, которые в будущем помогут в выборе подходящего инвесторам места.

Подключение библиотек, подготовка к анализу

Два заведения не могут иметь одинаковые широту и долготу. Значит заведения выше (или их брат-близнец с теми же координатами) внесены некорректно. Разобраться с тем, информация о каком из заведений внесена ошибочно нет возможности. Поэтому будем считать верным более ранний вариант. Возможно, дело в том, что датасет заполняли в течение некоторого периода времени, из-за этого некоторые заведения закрывались и на их месте открывались другие. Тем не менее, подобные случаи можно исключить без ущерба точности исследования.

Заведения с 0 мест не выглядят аномальными, возможно они работают только на вынос

Что было сделано в ходе предобработки?

- Пропуски в текстовых полях заменены значением unknown
- Пропуски в поле seats заменены значением -1
- Удалены аномальные значения seats

Анализ данных

- [x] Какие категории заведений представлены в данных? Исследуйте количество объектов общественного питания по категориям: рестораны, кофейни, пиццерии, бары и так далее. Постройте визуализации. Ответьте на вопрос о распределении заведений по категориям.

- [x] Исследуйте количество посадочных мест в местах по категориям: рестораны, кофейни, пиццерии, бары и так далее. Постройте визуализации. Проанализируйте результаты и сделайте выводы.

- [x] Рассмотрите и изобразите соотношение сетевых и несетевых заведений в датасете. Каких заведений больше?

- [x] Какие категории заведений чаще являются сетевыми? Исследуйте данные и ответьте на вопрос графиком.

- [x] Сгруппируйте данные по названиям заведений и найдите топ-15 популярных сетей в Москве. Под популярностью понимается количество заведений этой сети в регионе. Постройте подходящую для такой информации визуализацию. Знакомы ли вам эти сети? Есть ли какой-то признак, который их объединяет? К какой категории заведений они относятся?

- [x] Какие административные районы Москвы присутствуют в датасете? Отобразите общее количество заведений и количество заведений каждой категории по районам. Попробуйте проиллюстрировать эту информацию одним графиком.

- [x] Визуализируйте распределение средних рейтингов по категориям заведений. Сильно ли различаются усреднённые рейтинги в разных типах общепита?

- [x] Постройте фоновую картограмму (хороплет) со средним рейтингом заведений каждого района. Границы районов Москвы, которые встречаются в датасете, хранятся в файле admin_level_geomap.geojson (скачать файл для локальной работы).

- [x] Отобразите все заведения датасета на карте с помощью кластеров средствами библиотеки folium.

- [x] Найдите топ-15 улиц по количеству заведений. Постройте график распределения количества заведений и их категорий по этим улицам. Попробуйте проиллюстрировать эту информацию одним графиком.

- [x] Найдите улицы, на которых находится только один объект общепита. Что можно сказать об этих заведениях?

- [x] Значения средних чеков заведений хранятся в столбце middle_avg_bill. Эти числа показывают примерную стоимость заказа в рублях, которая чаще всего выражена диапазоном. Посчитайте медиану этого столбца для

каждого района. Используйте это значение в качестве ценового индикатора района. Постройте фоновую картограмму (хороплет) с полученными значениями для каждого района. Проанализируйте цены в центральном административном округе и других. Как удалённость от центра влияет на цены в заведениях?

- [ ] Необязательное задание: проиллюстрируйте другие взаимосвязи, которые вы нашли в данных. Например, по желанию исследуйте часы работы заведений и их зависимость от расположения и категории заведения. Также можно исследовать особенности заведений с плохими рейтингами, средние чеки в таких местах и распределение по категориям заведений.
- [x] Соберите наблюдения по вопросам выше в один общий вывод.

```

Распределение средних чеков по категориям
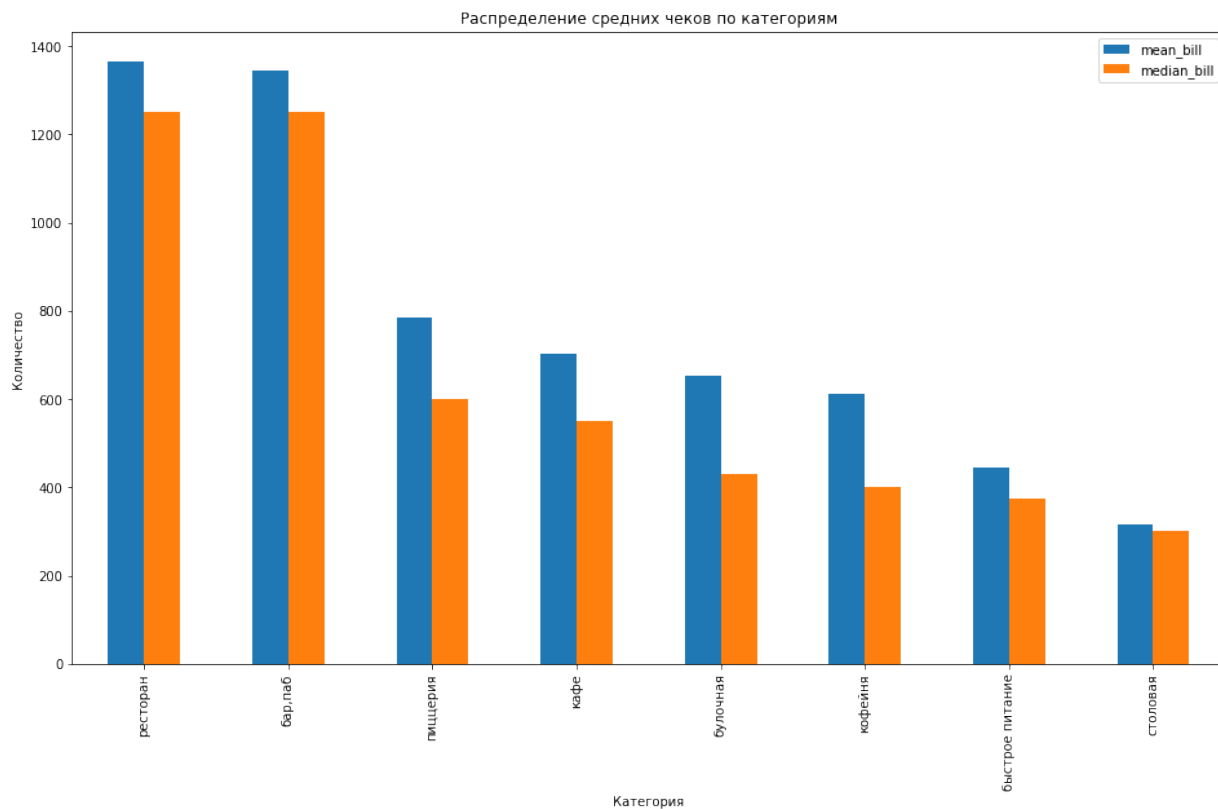

Заметим, что средний чек немного выше чем медианный, это может свидетельствовать о наличии выбросов в данных

Вывод по исследовательскому анализу данных:

Самые популярные категории - это кафе, ресторан и кофейня, они занимают более 60% всех заведений

В заведениях в среднем 60-90 мест, больше всего мест в барах, кофейнях, ресторанах

Примерно 60% заведений не сетевые

Среди сетевых заведений преобладают кафе, кофейни, рестораны. Среди не сетевых кафе и рестораны с большим отрывом

ТОП-3 заведений по числу точек: Шоколадница, Доминос Пицца, Додо Пицца. С полным списком из 15 заведений можно ознакомиться в исследовании

Самая большая доля заведений (~27%) относятся к цао, доля остальных округов 9-11% на каждый

Распределение категорий заведений по округам в целом повторяет общее распределение по Москве. Отличие в том, что в цао с большим отрывом лидируют рестораны

Средние оценки заведений для каждой из категорий чуть больше 4, ниже всего у быстрого питания, выше всего у баров

Больше всего заведений на Проспекте Мира, Профсоюзной улице и МКАД. При этом на МКАД в основном только кафе, а заведений других категорий почти нет.

Всего 463 улицы с одним заведением, скорее всего, это объясняется малой протяженностью этих улиц

Самые высокие средние чеки в в цао, зао. Средние в сао, вао, сзао, юзао. Низкие в юао, ювао, свао.

Отсутствует явно выраженная взаимосвязь между средним чеком и расстоянием до центра.

Самый высокий средний чек в барах и ресторанах, самый низкий - в быстром питании и столовых, при этом есть большие различия между средним и медианой, что может свидетельствовать о выбросах в данных

Детализируем исследование: открытие кофейни

```
In [81]:  cof = data.query('category == "кофейня"')
          cof.info()

Интересно что в зао самые низкие средние оценки при одном из самых высоких средних чеков. Можно ли это объяснить низким качеством заведений или более обеспеченные клиенты вместе с тем более требовательные.

При определении средней стоимости чашки кофе стоит отталкиваться от расположения кофейни, так, средняя стоимость чашки кофе меняется в зависимости от округа

Вывод: Кофейню стоит открывать в зао. По следующим причинам:

В зао самая высокая средняя стоимость чашки кофе
В зао один из самых высоких средних чеков наряду с цао. При этом кофеен меньше чем в цао, а территория больше.
В зао низкий средний рейтинг кофеен, что может свидетельствовать об их посредственном качестве. Но для однозначного определения причин низких оценок имеющихся данных недостаточно, нужно провести дополнительное исследование.
